DIRECTIONAL VALVE WITH PROPORTIONAL CONTROL SERIES 11

# SUBPLATE MOUNTING ISO 4401-03

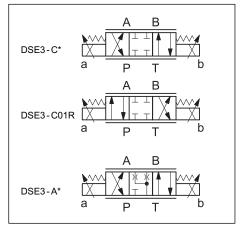

p max **350** bar Q max **40** l/min

## **OPERATING PRINCIPLE**

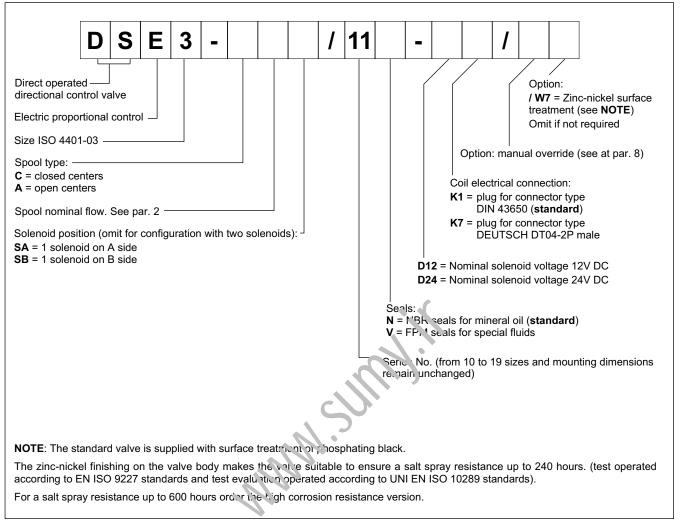

- The DSE3 valve is a direct operated directional control valve with electric proportional control and with ports in compliance with ISO 4401 standards.
- It is used for directional and speed control of hydraulic actuators.
- Valve opening and hence flow rate can be modulated continuously in proportion to the current supplied to the solenoid.
- The valve can be controlled directly by a current control supply unit or by means of the electronic control units to exploit valve performance to the full (see paragraph 11).
  - Also available with several manual override.

## HYDRAULIC SYMBOLS (typical)

83 210/216 ED

## **1 - IDENTIFICATION CODE**

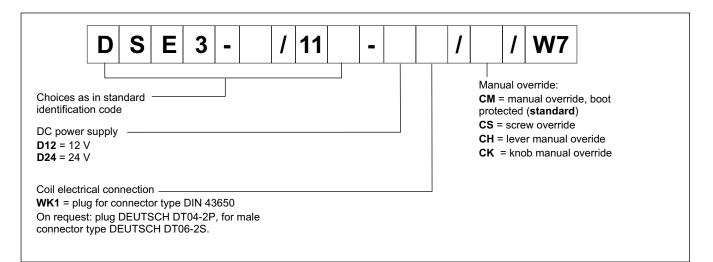

#### 1.2 - High corrosion resistance version

This version features the zinc-nickel coating on all exposed metal parts of the valve, making it resistant to exposure to the salt spray for **600 hours** (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

The coil are specific for this version, featuring a zinc-nickel surface treatment. Electrical features at paragraph 4.

The boot manual override (CM) is installed as standard in order to protect the solenoid tube.

Follow the indentification code below to order it:

"SB" configuration: 1 solenoid on side B.

2 positions (central + external) with

spring centering

## 2 - CONFIGURATIONS

Valve configuration depends on the combination of the following elements: number of proportional solenoids, spool type, nominal flow rate.

2 solenoids configuration:

3 positions with spring centering

A B

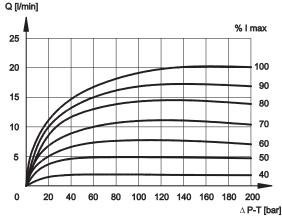

тт т

(values measured with viscosity of 36 cSt at 50°C with electronic control unit)

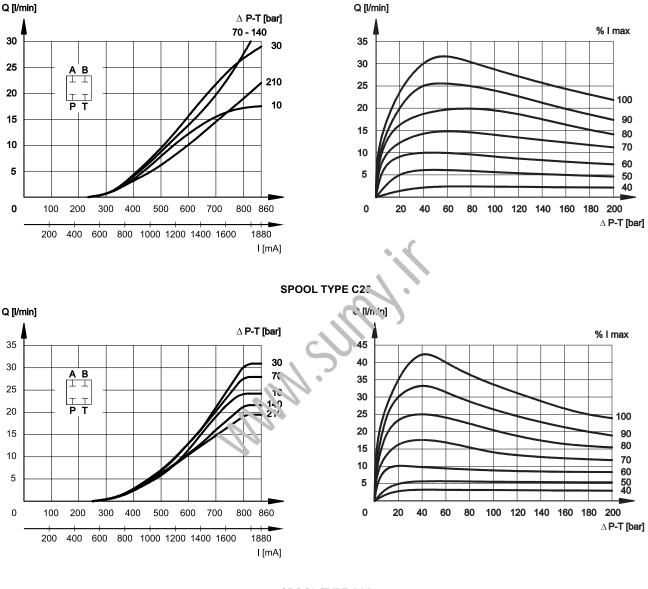

Typical flow rate control curves according to the current supply to solenoid. The reference  $\Delta p$  values are measured between ports P and T on the value.

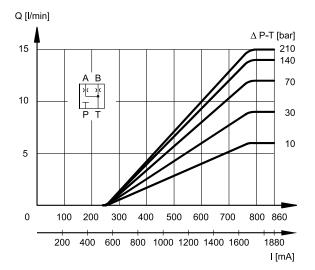

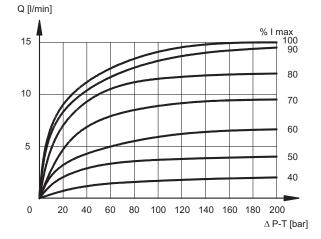

SPOOL TYPE C16

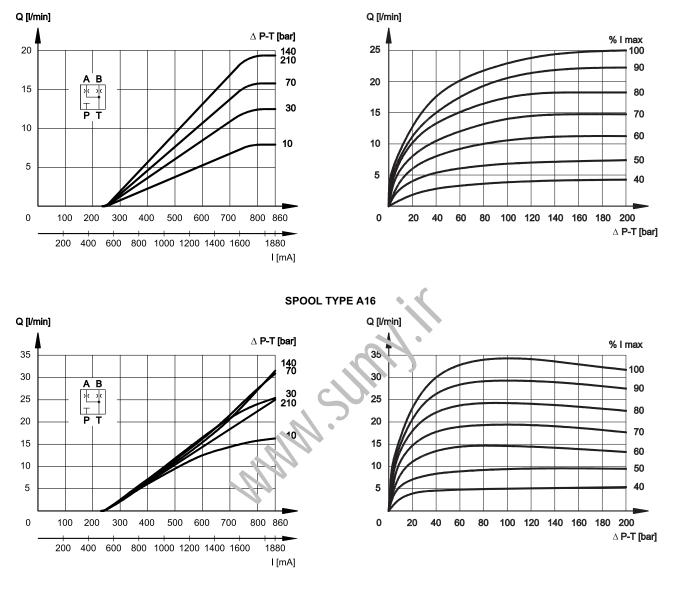

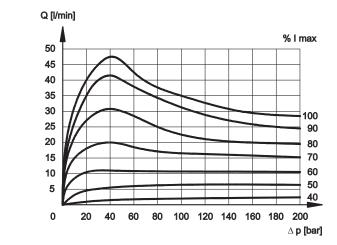

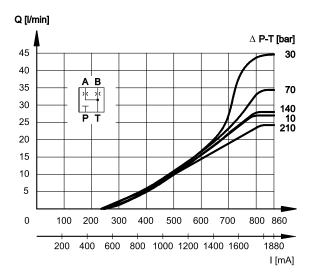

#### SPOOL TYPE A08

**SPOOL TYPE A26** 

## **4 - ELECTRICAL CHARACTERISTICS**

#### **Proportional solenoid**

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut. It can be rotated through 360° depending on installation clearances.

#### Protection from atmospheric agents IEC EN 60529

Plug-in type	IP 65	IP 69 K
K1 DIN 43650	x (*)	
K7 DEUTSCH DT04 male	х	x (*)

(\*) The protection degree is guaranteed only with the connector correctly connected and installed

(measured with mineral oil with viscosity of 36 cSt at 50°C with electronic

NOMINAL VOLTAGE	V DC	12	24

	Step response [ms]		
	DSE3-A* DSE3-C*	50	40

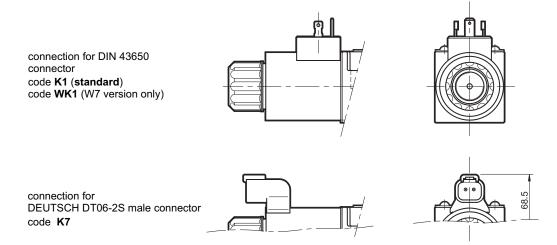

## control unit)

**5 - STEP RESPONSE** 

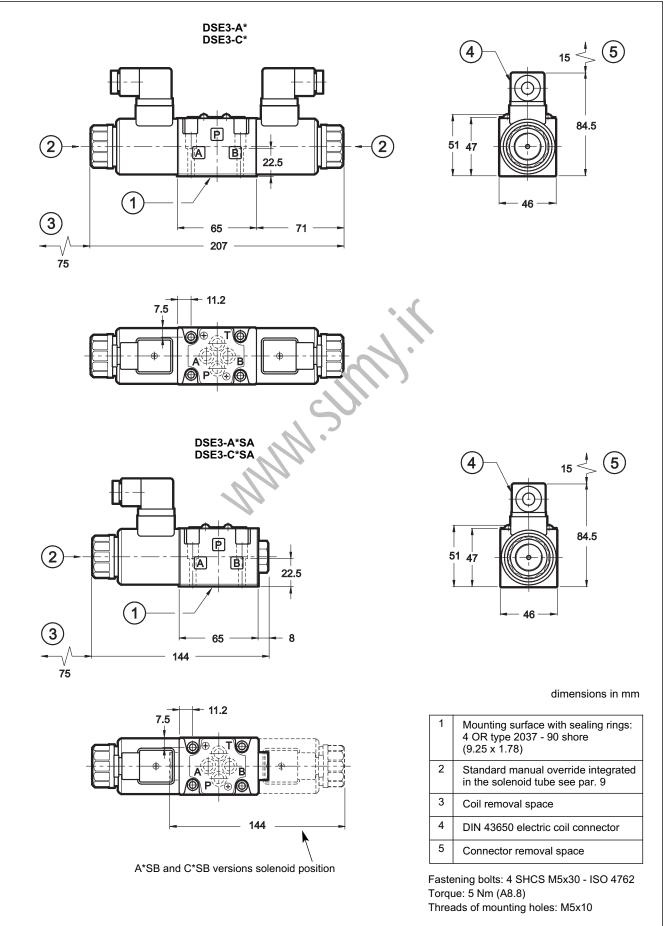

Step response is the time taken for the valve to reach 90% of the setted positioning value, following a step change of reference signal. The table shows typical response times tested with spc stype C16 and  $\Delta p$  = 30 bar P-T.

## **6 - ELECTRIC CONNECTIONS**

Connectors for K1 connection are always delivered toghether with the valves.

## 7 - OVERALL AND MOUNTING DIMENSIONS

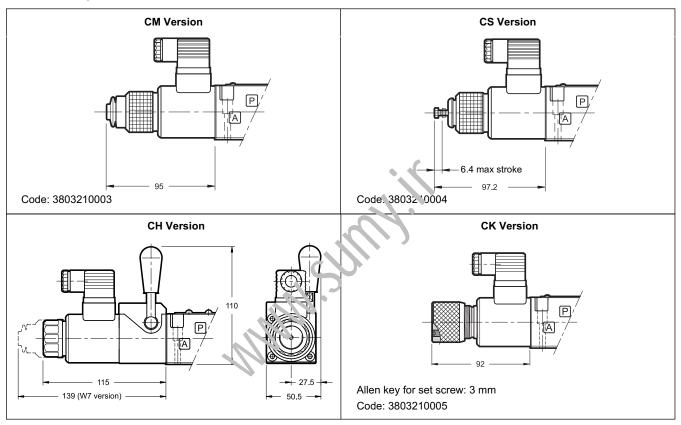

## 8 - MANUAL OVERRIDE

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface.

Four different manual override versions are available upon request:

- CM version, manual override belt protected.
- CS version, with metal ring nut provided with a M4 screw and a blocking locknut to allow the continuous mechanical operations.
- CH version, lever manual override. The lever device is always placed at the A side of the valve.
- CK version, knob. When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosing.

## 9 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids like HL or HM type, according to ISO 6743-4. With this kind of fluids, use NBR seals type (code N). For HFDR fluids type (phosphate esters) use FPM seals (code V). For use with other kind of fluids such as HFA, HFB, HFC please consult our technical department.

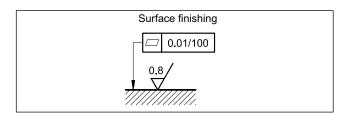

Operation with fluid temperature exceeding 80°C causes premature deterioration of the quality of the fluid and seals. The physical and chemical properties of the fluid must be maintained.

## **10 - INSTALLATION**

DSE3 valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

## **11 - ELECTRONIC CONTROL UNITS**

## DSE3 - \* \* SA (SB)
